SUMMARY

Results-driven Business Analytics professional with a proven track record of eliminating manual reporting, building executive-ready dashboards, and translating complex data into decisions organizations can act on. Skilled at moving from data collection to stakeholder presentation with a consistent focus on measurable business impact. Graduating December 2026 from UT Dallas, seeking Business Analyst and Financial Analyst roles.

EDUCATION

Bachelor of Science in Economics, Minor in Business Intelligence & Analytics
The University of Texas at Dallas, Richardson, TX

Expected December 2026
GPA: 3.94

SKILLS

BI & Visualization: Power BI (DAX, Power Query), Tableau, Streamlit, Plotly, Stata

Languages & Querying: Python (pandas, NumPy), SQL (CTEs, window functions, joins), R (tidyverse, ggplot2)

Reporting & Automation: Excel (VBA, PivotTables, VLOOKUP), SharePoint, SmartSheet, process automation

Analytics: Financial statement analysis, KPI development, regression analysis, time-series forecasting, data wrangling

Certifications: Google Data Analytics, Google AI, Bloomberg Market Concepts

PROJECTS

Public Company Financial Analysis | SQL, Power BI, SEC Edgar | May 2026 – In Progress

- Building an end-to-end financial reporting pipeline that pulls 10-K filings directly from SEC EDGAR into a SQL database, enabling analysts to track revenue growth, gross margin trends, debt-to-equity ratios, and operating leverage without manual spreadsheet work.
- Connecting a live Power BI dashboard to the database so financial metrics update automatically as new filings load, delivering executive-ready reporting that previously required hours of manual data entry.

Investment Performance Reporting Dashboard | Python, Pandas, SciPy, Streamlit, Plotly | Jan 2026 – Jun 2026

- Built and deployed a live analytics platform that tracks 110+ ETFs across 14 asset sectors, providing analysts with instant visibility into fund performance, risk, and return without touching a spreadsheet.
- Automated all risk and return calculations across the full pipeline, eliminating manual data work and delivering real-time results on every session.
- Automatically generated optimized portfolio recommendations, surfacing the best risk-adjusted fund allocations so analysts can make faster, more confident investment decisions without manual calculation.

Automated Market Data Pipeline | Python, REST APIs | Feb 2025

- Eliminated 80%+ of manual data processing time by automating the full pipeline from data collection to reporting, freeing analysts to focus on decisions rather than data preparation.
- Improved cross-team efficiency by documenting pipeline processes, data definitions, and reporting standards, enabling any team member to run the workflow independently.

PROFESSIONAL EXPERIENCE

Team Lead | TESO Life, Frisco, TX | Oct 2023 – Jun 2024

- Managed a 6-person merchandising team in a high-volume retail environment, improving inventory accuracy and operational efficiency through structured workflows and team accountability systems.
- Increased product visibility and sales performance by designing shelf placement strategies that optimized space utilization across multiple product categories.
- Partnered with store management to analyze weekly sales data, identify demand trends, and adjust inventory levels, reducing overstock waste and maintaining consistent stock availability through data-driven decision making.
